AIR GAP LIGHTNING ARRESTERS FOR DISTRIBUTION CIRCUITS. ED. 493.

GENTLEMEN,

I write to request you to quote your best prices and the earliest time of delivery for the following materials:—

400—Air Gap Lightning Arresters, single pole, for out-door use on 230-volts, 25 to 60 cycles lighting and power secondaries of Distribution Transformers, complete with Galvanised Iron brackets for fixing the arresters on angle iron cross-arms.

The lightning arresters shall be designed to have the characteristics of a simple gap arrester in limiting the surge voltage by flashing-over and by passing the energy of the surge to earth and of a valve type arrester in preventing an outage and restoring normal conditions following the discharge on the circuit due to lightning surges. The arrester shall be well insulated and built so that it will never constitute an hazardous connection to the distribution lines initially or later as a result of weather. The arrester shall also be so designed as to protect the transformer insulation against damage from over-voltages of any character whether produced by system disturbance or natural lightning.

Cathode-ray oscillograms showing the protective characteristics of the arresters, when subjected to A.I.E.E. standard test surge, shall be submitted with the tenders along with the technical information relating to the break-down voltage, the discharge capacity in amperes and the impedance drop of the arrester.

Full details and descriptive literature explaining the construction and the characteristics of the materials used in the manufacture of the arrester shall also be submitted along with the tenders, without which the quotations will not receive due consideration.

The prices to be quoted should be for delivery c.i.f., Madras.

Your quotation should reach this office on or before the 4th of November 1937.
